SUMMARY

Software Engineering graduate (PUC Minas, 2026) with two years of production experience building React/TypeScript frontends for healthcare systems. Picks up new stacks quickly — shipped Angular and Python to production on short notice — and now extending into Node.js backend work with AI coding agents. Two-time winner of PUC Minas's Best Interdisciplinary Project of the Semester.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C, HTML, CSS

Frontend: React, Next.js, Angular, Vue, Tailwind CSS

Backend & Data: Node.js, Supabase, MongoDB, PouchDB

Tools: Git, Linux, Claude Code, OpenCode

EXPERIENCE

Suporte Tecnologias

Sep 2024 – Present

Trainee Developer (Mar 2026 – Present) · Intern (Sep 2024 – Mar 2026)

- Build React/TypeScript interfaces for healthcare-sector systems, working across multiple concurrent projects.
- Delivered production features in Angular and wrote Python backend routines, learning both stacks on the job.
- Expanding into Node.js backend work alongside frontend tasks, using AI coding agents to ramp up quickly.

EDUCATION

B.Sc. in Software Engineering

Aug 2022 – Aug 2026

Pontifical Catholic University of Minas Gerais (PUC Minas), Belo Horizonte

ACADEMIC PROJECTS & AWARDS

Undergraduate Thesis — Web Accessibility in Government

Aug 2025 – Jul 2026

- Combined automated WCAG/e-MAG audits with screen-reader usability testing across five federal service flows.
- Found that the two most standards-compliant portals had 0% task completion for blind users — showing that automated compliance alone does not guarantee real accessibility.

Vulnerability Analysis in Transitive Maven Dependencies | Java, Maven

Feb 2025 – Jun 2025

- Automated the analysis of popular open-source Java repositories on GitHub to map how transitive dependencies introduce vulnerabilities, assessing dependency-management practices and supply-chain mitigation strategies.

Award: Best Interdisciplinary Project of the Semester — PUC Minas

LEHSA Lab Management System — Federal Institute of Sergipe

Feb 2024 – Jun 2024

- Replaced the spreadsheets, paper forms and informal coordination of a growing hydraulics and sanitation research lab with a single system for equipment, scheduling and requests.

Award: Best Interdisciplinary Project of the Semester — PUC Minas

FREELANCE & PERSONAL PROJECTS

Dokmint | React, TypeScript, MongoDB, PouchDB

Jan 2026 – Mar 2026

- Cross-platform note organizer for desktop and mobile, built with AI-assisted development (Claude Code).

SAtelier — Landing Page Redesign (Freelance) | HTML, JavaScript, Tailwind CSS

May 2025 – Jun 2025

- Redesigned a software company's outdated landing page, keeping the stack lightweight at the client's request.

Warframe RelicShare | Next.js, Node.js, Supabase

May 2024 – Aug 2024

- Community platform that helps Warframe players coordinate in-game item trades.

Conveyor Belt Wear Detector — for LINK | ESP32, C, PCB design

Jan 2023 – May 2023

- Prototyped a system to detect wear on mining conveyor scraper blades, with custom-designed PCBs and C firmware.
