SUMMARY

Software Engineering graduate (PUC Minas, 2026) with two years of production experience building React/TypeScript frontends for healthcare systems. Picks up new stacks quickly — shipped Angular and Python to production on short notice — and is actively extending into Node.js backend work with AI coding agents. Two-time winner of PUC Minas's Best Interdisciplinary Project of the Semester.

SKILLS

Frontend: React, Next.js, Angular, Tailwind CSS, TypeScript, JavaScript, HTML, CSS

Backend & Data: Node.js, Python, Supabase, MongoDB

Tools & Other: Git, Linux, Claude Code, OpenCode, C

Languages: Portuguese (native), English (fluent)

EXPERIENCE

Suporte Tecnologias (Sep 2024 – Present)

Trainee Developer · promoted from Intern in Mar 2026

- Build React/TypeScript interfaces for healthcare-sector systems, contributing to around a dozen projects to date.
- Delivered production features in Angular and wrote Python backend routines, learning both stacks on the job.
- Expanding into Node.js backend work alongside frontend tasks, using AI coding agents to ramp up quickly.

EDUCATION

B.Sc. in Software Engineering (Aug 2022 – Aug 2026)

Pontifical Catholic University of Minas Gerais (PUC Minas), Belo Horizonte

ACADEMIC PROJECTS & AWARDS

Undergraduate Thesis — Web Accessibility in Government (Aug 2025 – Jul 2026)

- Combined automated WCAG/e-MAG audits with screen-reader usability testing across five federal service flows.
- Found that the two most standards-compliant portals had 0% task completion for blind users — showing that automated compliance alone does not guarantee real accessibility.

Vulnerability Analysis in Transitive Maven Dependencies (Feb – Jun 2025)

- Built a Python tool that analyzed 4,000 popular open-source Java repositories on GitHub, mapping how transitive dependencies introduce vulnerabilities and assessing mitigation strategies.

Award: Best Interdisciplinary Project of the Semester — PUC Minas

LEHSA Lab Management System — Federal Institute of Sergipe (Feb – Jun 2024)

- Replaced a research lab's spreadsheets, paper forms and informal coordination with a single system for equipment, scheduling and requests; developed the Next.js frontend as part of the team.

Award: Best Interdisciplinary Project of the Semester — PUC Minas

FREELANCE & PERSONAL PROJECTS

Dokmint (Jan – Mar 2026)

- Local first cross-platform (desktop and mobile) notes and document organizer that saves locally on PouchDB and syncs with MongoDB when a connection is available. Built with React, TypeScript, Express, Node.js, MongoDB and PouchDB.

Landing Page Redesign — Freelance for SATelier (May – Jun 2025)

- Redesigned a software company's outdated landing page in plain HTML, JavaScript and Tailwind CSS.

Warframe RelicShare (May – Aug 2024)

- Community platform to help Warframe players coordinate in-game trades, with a custom account verification system. Built with Next.js, React and Supabase.
- Grew a Discord community of 167 members.

Conveyor Belt Wear Detector — Freelance for LINK (Jan – May 2023)

- Prototyped a wear detector for mining conveyor scraper blades with custom PCBs, ESP32 firmware in C and Firebase.
